Summary:

Aspiring Software Engineer with strong academic foundation from Dr. Mahalingam College of Engineering and Technology and hands on experience in full-stack development. Passionate about cloud technologies, data analytics, and scalable web applications.

Skills:

Tools (Git, Postman, MongoDB Compass).

Data Science & Analytics (Big Data, Data Visualization, Machine Learning)

Web Development (Frontend, Backend, Web Framework).

Education:

Bachelor of Engineering in Computer Science and Engineering

Dr. Mahalingam College of Engineering and Technology, Pollachi.

May,2027

7.7

Sowdambikaa Matric. Higher. Secondary School.

Apr,2023

83 %

Projects:

Password Generator

Jun 2025

Developed a secure password generator using Device ID and Instance ID.

Reduced manual errors by 90%.

Role: Frontend Developer (Java, Spring Boot).

Heart Disease Prediction System

May 2025

Built a prediction system using Random Forest Algorithm.

Role: Backend and Frontend Developer (Python, Flask, HTML/CSS).

Blood Donation App

Apr 2025

Developed a web application connecting blood donors with recipients based on blood group and location.

Reduced donor search time by enabling real-time availability tracking and request notifications.

Role: Full-Stack Developer (React, Node.js, MongoDB).

Student Performance Prediction System

Dec 2025

Developed an end-to-end ML web application using Flask to predict students' final exam scores based on study hours, attendance, sleep duration, and previous performance.

Implemented data preprocessing, feature scaling, model training, and evaluation using Linear Regression and Decision Tree Regression, selecting the best model based on R^2 , MAE, and MSE.

Role: AI Model Developer (Python, Flask, Scikit-Learn).

HR Management System using JDBC

Jan 2026

The HR Management System using JDBC is a Java-based application designed to streamline and automate various human resource operations within an organization.

The system provides a secure and user-friendly interface for HR personnel to perform CRUD (Create, Read, Update, Delete)

Role: Backend Developer (Java, MySQL).

LSTM-Based Crime Prediction System

May 2026

The LSTM-Based Crime Prediction System is a machine learning project that uses Long Short-Term Memory (LSTM) neural networks to forecast future crime patterns based on historical data.

By analysing past crime records—such as location, type, and time—the system learns temporal trends.

Role: AI Model Developer (Python, LSTM).

Experience:

App Development – Mentor Circuits [Coimbatore].

Jun 2025

Contributed to the development of a Password Generator App.

Collaborated with cross-functional team to enhance UI/UX and backend features.

Certifications:

NPTEL – Environmental Impact Assessment.

Oct 2024

MongoDB Atlas Certification.

Jun 2025

Python Bootcamp – Infosys Springboard

May 2025
